PRODUCT CATALOG

Reliable Color Light Solutions

Engineered from the ground up for control systems like Control4, Crestron, Elan, URC, and RTI.

Developed by integrators for integrators seeking a cost-effective DMX lighting solution.

Fully Integrate with the Axion PoE & Wi-Fi DMX Controller

This solution is designed to deliver unparalleled reliability with a specific focus on the best possible control integration possible. Specifically, our controller gives full exposure of DMX devices in Control4, Crestron, Elan, and RTI systems.

Our ecosystem is designed to give partners a highly flexible, modular option that can grow as needs and preferences change.

Our primary target is both tunable whites, RGB and RGBW, but because it interacts using the DMX512 protocol, it will also support many other commercial devices such as motors, lasers, smoke machines, and more.

Axion COB LED Strip Tape

Our 24-volt COB LED strips are built to last and have the highest quality components to ensure consistent light output and easy installation.

All of our tape light LED strips feature the following:

- 3M adhesive backing
- 8-inch wire leads on both ends
- Quick connectors for easy linking of multiple strips without soldering or crimp connectors
- Outdoor rated strips now feature high quality silicone drip glue to help keep the PCB size small
- RGBW strips all have 4000K dedicated white LEDs

These COB strips are a great alternative to the traditional high-density versions when you want consistent light output across the entire strip or when the strip itself may be visible.

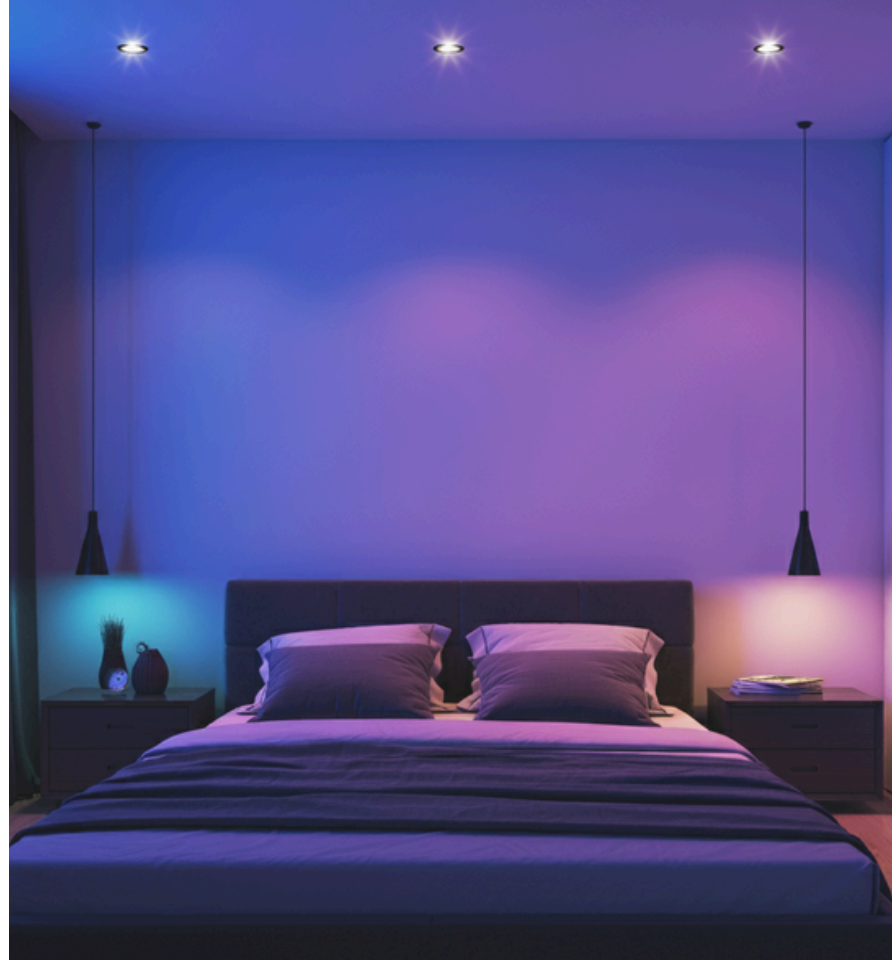

Axion High Density LED Strip Tape

The high density LED strips give a cost effective but performant solution for anyone looking to add either tunable white, RGB, or RGBW accent lighting to any project.

These traditional high-density strips produce a crisp, clean, bright light, adding to the ambiance of any space.

Axion RGBW LED Recessed Downlights

The RGBW LED high efficiency recessed in-ceiling downlights are controllable using the Axion Lighting DMX Controller, DMX Decoder or any 24V compatible product.

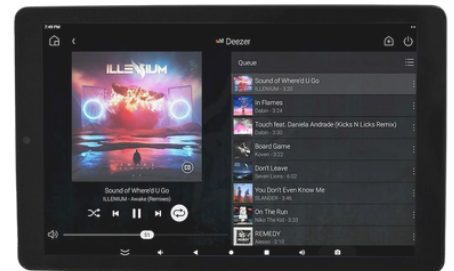

Features Include:

- New diffuser so you get a nice clean color profile when looking directly at the light. No more LED hot spots.
- A complete 24-volt line. No more having to mix and match 12-volt for the previous 4" unit.
- The dedicated white LED is now 4000 Kelvin, producing a nice soft white great for any application

Why limit yourself to a single white color when installing recessed ceiling lights? We have RGBW spotlights and LED strips, so why not provide the same experience with your downlights?

Axion Android PoE Touch Screen

Axion Lighting 5.5", 8" and 10" touch screens offer the perfect interface solution for any home or commercial project. Even if you don't have a control system like Control4, Elan, RTI, Crestron, or URC, these touch screens are great for everyday life organizing using apps like Calendar, Tasks and more.

Full access to the Google Play Store means your favorite apps are only a tap away! Commercial applications are endless; perfect for board rooms or meeting spaces where you want to display bookings or reservations. Power over Ethernet equates to a single wire solution and using a standard US single gang back box allows for easy retrofit or new installations.

Axion RGBW LED Spot Lights

The RGBW spotlight series gives full control over all colors in a living space or outdoor setting. Perfect for accenting artwork, unique wall textures, outdoor buildings, trees, and more.

IP67 rated so perfect for indoor or outdoor use. Leveraging this fixture and our robust DMX Controller along with DMX decoders you can create a whole house indoor and outdoor system that is low voltage, dimmable, easily integrates with popular control system platforms, and gives you millions of colors and temperatures to set the perfect ambiance.

Axion RGBW Wall Washer Light Bar

These IP67 indoor and outdoor rated RGBW color wall washer LED bars are perfect for illuminating artwork, walls, or even general spaces. At 15 watts with a dedicated 3000K white LED plus RGB, they are versatile enough to fit any situation. The 60 degree beam angle ensures good coverage across the spectrum. Weatherproof sealing connectors at each end allow you to easily link multiple units together.
